

Natural Sports

Installation

Installation

All Elements of a Parkour Training Facility are to be installed safely by Natural Sports or approved contractors in accordance with the our instructions. In most circumstances Natural sports have a dedicated Parkour Training Facility installation team that will carry out installation.

Our installation teams have installed many Parkour Training Facilities across Europe and have also installed many skate, Climbstone and Rox projects and are therefore experienced in the heavy lifting involved in a project of this kind.

Natural Sports do not recommend using unapproved installers as the installation of a Parkour Training Facility is a specialised discipline that requires detailed installation instructions and experience.

At all key stages of the installation we will arrange a meeting on site with the client for that stage to be signed off.

A full site induction is carried out before the installation work is allowed to commence which will include detailing the following (if required):

- Site set up & Marking out
- Excavations
- Sub bases if required
- Installation
- Jointing & fixing
- Surfacing
- Inspection
- Snagging
- Handover

All of the operatives and sub-contractors Natural sports use have the correct level of training and certification to operate the machinery and tools required.

Certificates held include:

- CSCS
- CPCS Excavators
- CPCS Front tipping vehicles up to 10 ton
- Abrasive Wheel
- CAT Scanners
- Generator Operation & Maintenance
- BTEC Level 3 Advanced in Playground, Inspection, Operation and Maintenance
- BTEC Level 3 General Health & Safety

All installations are overseen by Marcus Reader ensuring the client has one point of contact who is fully aware of everything that is happening on site.
